MILLENNIUM LIGHT INTERFERENCE COLOR (LIC) CAPABILITIES

RESILIENT COLOR, INSIDE-OUT

Light Interference Color (LIC) is an electrochemical process that thickens the chromium oxide in stainless steel. This clear layer acts like a prism, refracting light and creating different colors.

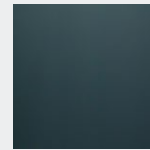

With Bobrick LIC accessories, the color and finish are integral to the material, allowing designers to realize luxurious concepts, without risk of delamination or degradation.

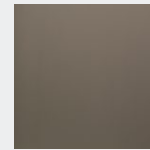

THE DESIGN & PERFORMANCE YOU EXPECT

Combine a range of colors and unique textural finishes with the familiar look, durability and reliable performance of Bobrick **TrimLineSeries™ accessories**, from combination units to paper towel dispensers and more. Select Bobrick mirror frames and ClassicSeries® accessories also are available with LIC colors and textures.
