Please refer to our **CDC Cleaning & Disinfection Guidelines** for specific instructions on cleaning and disinfecting hard surfaces.

To clean Wilsonart® HPL, Solid Surface or Quartz surfaces on a daily basis, all you need is dishwashing liquid, warm water and a microfiber cloth. Apply a mixture of dish soap and water to your counters using the cloth. As you wipe the surface, rinse your cloth in clean water. Wilsonart recommends the following cleaners:

- Windex®
- Formula 409®
- Glass Plus®
- Purell Multi-Surface®
- Fantastik®
- Isopropyl Alcohol (Isopropanol)
- Mr. Clean®

DILUTED BLEACH SOLUTION
As with any disinfectant, soiled surfaces need to be cleaned with water and detergent first. When properly used, bleach is a strong and effective disinfectant – its active ingredient, sodium hypochlorite, is effective in killing bacteria, fungi and viruses. A diluted bleach solution* following CDC mixing guidelines is an acceptable chemical disinfectant if used appropriately.
- A bleach solution may be prepared by mixing:
  - 5 tablespoons (1/3 cup) bleach per gallon of water or,
  - 4 teaspoons bleach per quart of water.
- CDC recommends a contact time of at least one minute.
- Exposure of a bleach solution should not exceed two minutes.
- Always rinse thoroughly with warm water and soap and water after use.
- Follow manufacturers' guidelines and safety precautions.

BRANDED CLEANERS & DISINFECTANTS
The following branded cleaners and disinfectants have been tested on Wilsonart® surfaces based upon ISO 4586-2 Method 31 (B) and BIFMA HCF 8.1-2014 (Section 6/Modified) test standards. Results vary by product type and can be found on our Technical Data Sheets. Please see links on page 2.

To determine if a product is registered with the EPA for use against SARS-CoV-2, the virus that causes COVID-19 refer to EPA: List N: Disinfectants for Use against SARS-CoV-2.

HPL	TRACELESS™	CHEMSURF®	COMPACT	COMPACT Laboratory Grade	SOLID SURFACE	QUARTZ

CAUTION - Cleaners and disinfectants with the following active ingredients in various mix ratios and solutions may pose a threat to any surface and cause irreparable damage. Prolonged exposure of the surface to bleach will cause discoloration.
- Peroxide(s)
- Bleach (sodium hypochlorite)
- Strong acids (phosphoric acid is often used, very low pH values)
- Strong bases (sodium hydroxide, potassium hydroxide, high pH values)

As is the case with all cleaners, exposure time is the key. Often surface damage is due to poor removal of the cleaning agent (spills, drips, etc. that are not removed). It is recommended to test a cleaner on a small area of the surface first. Prolonged exposure, chemical dilutions and frequency of cleaners, disinfectants, and/or sanitizers used on the surface can cause degradation and/or discoloration.

For additional information on how to properly clean & disinfect your surfaces, please refer to the following documents that can be found at www.wilsonart.com/performs/cleanability:
