## **Bobrick Expands Fino Collection to Deliver a Fully Coordinated Commercial Washroom Ecosystem**

**North Hollywood, C.A. — March 18, 2026 —** [Bobrick Washroom Equipment](#) has launched an expansion of its premium Fino Collection, extending the integrated washroom line to include new sensor faucets and top-fill soap dispensers as well as three new accessories — a coordinating toilet seat cover dispenser, sanitary disposal, and combination towel and waste unit. The expansion builds upon Fino’s existing washroom accessories to complete a unified suite designed to bring architectural harmony to the entire commercial washroom environment, from the vanity to the cubicle.

“The contemporary washroom not only serves an essential functional purpose, it has also become a reflection of material quality, attention to detail, care and design intent,” said Matthew Louchheim, President of Bobrick Washroom Equipment, Inc. “With the Fino expansion, we are giving architects a complete vocabulary to express that intent without compromise.”

The [Fino Collection](#), born from a collaboration with the award-winning Thrislington Cubicles, part of the Bobrick family of brands, is a complete washroom accessory system. It draws on disciplined geometry, seamless construction, well-defined edges and concealed hardware. Crafted from high-quality stainless steel, the collection delivers refined aesthetics calibrated for high-traffic commercial environments. Finishes in satin stainless and matte black provide the versatility to anchor diverse interior palettes, ensuring that each element complements the surrounding architecture.

In the vanity area, the [top-fill soap dispenser](#) is a highlight of the collection’s engineering. It features a patented 2-inch-wide integrated funnel designed specifically to make pouring bulk jug soap simple and mess-free. This design is estimated to save facilities up to 25% in maintenance time by streamlining the replenishment process and eliminating the need for maintenance staff to crawl under counters to change proprietary cartridges. The dispenser’s matching [sensor-activated faucets](#) complement the collection’s sleek, modern design while fulfilling the baseline expectation for a hygienic, touchless experience.

Nearby, the [combination towel and waste unit](#) consolidates two essential functions into a single architectural frame, reducing wall clutter while supporting operational efficiency through

Bobrick's proprietary TowelMate® technology, which dispenses one towel at a time. This technology is proven to reduce paper towel waste up to 20%, demonstrating that high-end design can be a powerful driver of sustainability and operational efficiency.

The Fino expansion also introduces two new accessories to the cubicle environment. The new [toilet seat cover dispenser](#) and [sanitary disposal](#) bring a refined, minimal presence to the private stall environment.

Fino's expanded collection allows architects and specifiers to source coordinated accessories from a single design platform. While each product may be specified independently, the collection is conceived as a cohesive system engineered to deliver visual harmony, operational efficiency and long-term durability.

“As new construction slows and retrofit activity increases, architects are seeking cost-effective strategies to modernize aging washrooms without full reconstruction,” said Louchheim. “The Fino Collection offers a comprehensive solution that enhances architectural impact through finish, form, and detail while meeting the performance demands of high-traffic commercial environments.”
