Bobrick Launches Redesigned Wall-Mounted Automatic Soap and Sanitizer Dispensers

New dispensers combine elevated stainless steel design with tailored serviceability features that save maintenance teams time and money

NORTH HOLLYWOOD, Calif. — Sept. 28, 2026 — [Bobrick](#) has redesigned its legacy [Wall-Mounted Automatic Soap and Sanitizer Dispensers](#), unveiling new models that deliver elevated aesthetics, functionality, and serviceability to touch-free hand hygiene in commercial environments.

Replacing Bobrick's previous wall-mounted automatic dispensing models, the new dispensers are designed to provide architects, designers, and facility maintenance professionals with a seamless design solution while reducing ongoing refill costs. The dispensers accommodate universal bulk-jug foam soap, liquid soap, and hand sanitizer, eliminating the need for proprietary cartridges and potentially providing more than 80% savings compared with proprietary cartridge systems.

"The new Wall-Mounted Automatic Soap and Sanitizer Dispensers reflect our approach to combining thoughtful design with practical performance," said Nilo Yagana, vice president of marketing at Bobrick. "We wanted to create a dispenser that complements the design of the modern commercial washroom while also addressing the day-to-day considerations that matter to facility teams, from maintenance and refilling to long-term operating costs."

The dispensers, available in satin stainless and matte black finishes, feature a seamless 18-gauge stainless steel cabinet with a soap-level window. A low-profile, 4-inch depth supports ADA-compliant installations while helping integrate with wall-hung sinks and washrooms where counter space is limited. The elegant design also coordinates with Bobrick's TrimLineSeries™ and ClassicSeries® faucets and accessories to create a cohesive washroom aesthetic.

Beyond appearance, the redesigned platform incorporates features intended to simplify cleaning and maintenance, allowing dispenser refilling and cleaning to be completed in less than 30 seconds.

Additional features include:

- **Service-focused design:** A service button temporarily disables dispensing during cleaning, while flush tumbler locks, keyed to match other Bobrick accessories, streamline maintenance and help protect the dispenser from tampering.
- **Proactive status indicators:** An LED indicator provides visual alerts for low-soap and low-battery levels, helping facility teams stay ahead of maintenance needs.
- **Drip-free dispensing:** The leak- and drip-free pump with suck-back technology helps prevent residual soap from dripping onto floors and counters, reducing maintenance time and lowering operational costs.
- **Refined output:** Three dosage settings allow facilities to adjust soap or sanitizer output based on their needs, while the dispenser provides high-quality lathery foam.
- **Long battery life:** The dispenser is designed to provide up to three years or 120,000 cycles of battery life.
- **Integratable platform:** The dispensers are SMART-capable and designed to support compatibility with advanced facility management systems.

Available in 1,000 mL capacity, the Wall-Mounted Automatic Soap and Sanitizer Dispensers are designed for use across a range of commercial washroom environments where aesthetics, accessibility, maintenance efficiency, and long-term operating value are priorities.
