EVOLVE CUBICLES

COMPACT GRADE LAMINATE

BUILT-IN PRIVACY. DURABLE. BUDGET-FRIENDLY.

Privacy isn't a fad—it's increasingly an expectation across a range of building types. Evolve Cubicles help design professionals create resilient, European-style cubicle systems without compromising project budgets.

PANELS & DOORS

- Class-A Fire-Rated Compact Grade Laminate (Solid Phenolic)
- 1/2" material thickness
- 82" overall cubicle height
- 72" panels and doors with 9" floor clearance

FRAME & HARDWARE

- Built-in, no-sightline privacy
- Floor-anchored, overhead-braced installation
- Anodized aluminum frame provides superior structural support
- Anodized aluminum hardware matches frame
- Anti-finger trap frame
- Occupancy indicator with emergency key release feature
- Soft-close spring loaded closing mechanism incorporated into pivot foot

APPLICATIONS

Evolve is engineered for heavy traffic applications where durability and privacy are important, but budget may be limited, such as:

- Shopping centers
- Airports
- Convention centers
- Higher education facilities
- Locker rooms

SMART DESIGN

Evolve's closing latch, with sacrificial hard nylon shear tip, locks into the frame.

DEPTH DONE RIGHT

Most cubicle dividers deeper than 60" require two panels with unattractive brackets to achieve the desired depth.

FUNDERMAX Compact Grade Laminate provides a one-piece solution eliminating the need for extra hardware and offering greater stability.

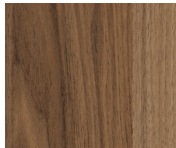

FUNDERMAX material also offers Class A ASTM E 84 Interior Wall Fire-Rating Finish classification at a Class B Fire-Rating classification price.
